My calves are growing faster and stronger with Axcelera-C - I'm now targeting 22 month calving.

"Axcelera-C is stimulating appetite leading to higher growth rates and faster rumen development. My calves are growing stronger and faster and this should help them fight pneumonia and face other challenges better."

Sam Foot, Dorset, 900 cows

'More from less' at award-winning dairy farm: Weaning at 35 days. Faster growing calves. Saving £14+ rearing costs per calf.

In addition to the improved performance for less money, an almost complete absence of both scours and pneumonia was exceptional under normal farm conditions. Stress of the weaning process is reduced, allowing for a greater growth momentum and adaptation to efficient ruminant digestion.

Award-winning Dairy Farm, South England.

Weaning 2 weeks earlier and calves are noticeably bigger.

Calves have been fed Axcelera-C for over a year. They develop much quicker, (cudding at 2 weeks), have aggressive feed intakes, with visibly improved health, vigour and vitality. Previously, calves have routinely suffered from scours.

Large Montbeliard herd, North West England - 450 calves / year.

My accelerated calves clearly grow better and stronger - and cope better with on-farm challenges.

Axcelera-C is an easy way of producing bigger cattle and significantly reduce lifetime mortality on my own farm system."

Gary Allis, Furzehill Farm, Lincolnshire. Beef Farmer of the Year Finalist 2015.
